What type of student are you?

A student is usually the one that makes up the school, they come to school to learn, meet other students, become friends with them and discover new interests. There are many types of students that can be described by their behaviour, interests, and overall participation in class. These types of students can still be found even in an online environment during this stressful situation.

There is always that type of student that cracks jokes every so often or disrupts the class; the funny student. Funny students are very talkative to others and often have a lot of friends. They can sometimes be bothersome during the class, making noise or disturbing other students.

In the same way, there is the enthusiastic student. An enthusiastic student is the one with the straight A's, perfect attendance, and is very extroverted. They are often picked to be the leader of the class' section and are very motivated to do their tasks successfully. They are also very friendly to their teachers and often ask questions to them.

On the other hand, there are students that do the opposite; the procrastinator student. These students delay their tasks and sometimes participate in class. Their internet is always seemingly slow and unresponsive, which may lead them to actually having to delay what they need to do in order to try and get their internet to work.

Similarly, there's the insecure student, a more drastic version of the procrastinator student. These students are very shy, they rarely open their cameras and barely talk in their microphone. They are not confident and are very anxious towards other students, and they also overthink if they are under pressure from school works.

These types of students are still present even in the current situation which led to classes being conducted online. There will be students that are very active like the funny and enthusiastic ones, and there will be students that are having a hard time getting used to the online format. Students are all unique from one another, even if times are hard.
